Space Modeling with SolidWorks and NX By Jože Duhovnik, Ivan Demšar, Primož Drešar

Through a series of step-by-step tutorials and numerous hands-on exercises, this book aims to equip the reader with both a good understanding of the importance of space in the abstract world of engineers and the ability to create a model of a product in virtual space – a skill essential for any designer or engineer who needs to present ideas concerning a particular product within a professional environment. The exercises progress logically from the simple to the more complex; while Solid Works or NX is the software used, the underlying philosophy is applicable to all modeling software. In each case, the explanation covers the entire procedure from the basic idea and production capabilities through to the real model; the conversion from 3D model to 2D manufacturing drawing is also clearly explained. Topics covered include modeling of prism, axisymmetric, symmetric and sophisticated shapes; digitization of physical models using modeling software; creation of a CAD model starting from a physical model; free form surface modeling; modeling of product assemblies following bottom-up and top-down principles; and the presentation of a product in accordance with the rules of technical documentation. This book, which includes more than 500 figures, will be ideal for students wishing to gain a sound grasp of space modeling techniques. Academics and professionals will find it to be an excellent teaching and research aid, and an easy-to-use guide.

Academics and professionals will find it to be an excellent teaching and research aid, and an easy-to-use guide.

About the Author

Jože Duhovnik is full professor of Engineering Design, founder and head of LECAD (Laboratory for Computer Aided Design) at University of Ljubljana, Slovenia. His research focuses on theory of design, development technic, project leading, information flow in CAD process, geometrics design and models of global product realization.

Users Review

From reader reviews:

John Lee:

In other case, little individuals like to read book Space Modeling with SolidWorks and NX. You can choose the best book if you appreciate reading a book. As long as we know about how is important any book Space Modeling with SolidWorks and NX. You can add expertise and of course you can around the world by the book. Absolutely right, mainly because from book you can recognize everything! From your country until finally foreign or abroad you can be known. About simple matter until wonderful thing you may know that. In this era, we can open a book or perhaps searching by internet unit. It is called e-book. You can use it when you feel uninterested to go to the library. Let's read.

Tara Scribner:

Reading a publication tends to be new life style with this era globalization. With looking at you can get a lot of information that may give you benefit in your life. Together with book everyone in this world can certainly share their idea. Textbooks can also inspire a lot of people. A lot of author can inspire their particular reader with their story or their experience. Not only the storyplot that share in the ebooks. But also they write about advantage about something that you need illustration. How to get the good score toefl, or

how to teach your kids, there are many kinds of book which exist now. The authors on this planet always try to improve their talent in writing, they also doing some research before they write for their book. One of them is this Space Modeling with SolidWorks and NX.

Judith Judd:

Does one one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Try to pick one book that you just dont know the inside because don't evaluate book by its cover may doesn't work the following is difficult job because you are frightened that the inside maybe not while fantastic as in the outside appear likes. Maybe you answer is usually Space Modeling with SolidWorks and NX why because the fantastic cover that make you consider about the content will not disappoint you actually. The inside or content is definitely fantastic as the outside or maybe cover. Your reading 6th sense will directly guide you to pick up this book.

Ryan Young:

Some people said that they feel bored stiff when they reading a guide. They are directly felt that when they get a half portions of the book. You can choose the actual book Space Modeling with SolidWorks and NX to make your reading is interesting. Your current skill of reading expertise is developing when you similar to reading. Try to choose very simple book to make you enjoy to see it and mingle the feeling about book and looking at especially. It is to be initial opinion for you to like to open up a book and study it. Beside that the book Space Modeling with SolidWorks and NX can to be your new friend when you're truly feel alone and confuse with what must you're doing of these time.
