Environmental Materials and Waste: Resource Recovery and Pollution Prevention From imusti

Environmental Materials and Waste: Resource Recovery and Pollution Prevention contains the latest information on environmental sustainability as a wide variety of natural resources are increasingly being exploited to meet the demands of a worldwide growing population and economy.

These raw materials cannot, or can only partially, be substituted by renewable resources within the next few decades. As such, the efficient recovery and processing of mineral and energy resources, as well as recycling such resources, is now of significant importance.

The book takes a multidisciplinary approach to fully realize the number of by-products which can be remanufactured, providing the foundation needed across disciplines to tackle this issue. As awareness and opportunities to recover valuable resources from process and bleed streams is gaining interest, sustainable recovery of environmental materials, including wastewater, offers tremendous opportunity to combine profitable and sustainable production.

- Presents a state-of-the-art guide to environmental sustainability
- Provides an overview of the field highlighting recent and emerging issues in environmental resource recovery that cover a wide array of by-products for remanufacture potential
- Details a multidisciplinary approach to fully realize the number of by-products which can be remanufactured, providing the foundation needed across disciplines to tackle these global issues

Editorial Review

About the Author

M.N.V. Prasad is a Professor in the Department of Plant Sciences at the University of Hyderabad. He has served the Ministry of Environment, Forests and Climate Change, Government of India in various advisory committees on biodiversity conservation, ecosystem services, pollution control and abatement, environmental information systems and bioremediation of contaminated sites. He is an active visiting scientist in several international universities. He is the editor, co-editor, or author of 15 books and 95 journal articles (with over 6277 journal citations and h-index 41 as per google scholar). He has made outstanding contributions to the fields of Bioremediation, Bioresources, Biomass energy sources, bioeconomy and to the broad field of environmental biotechnology (including value chain and value addition products from plants used in phytoremediation) and bioremediation are his main areas of expertise.

Dr. Kaimin SHIH is an Associate Professor in the Department of Civil Engineering and leads the Environmental Materials Research Group at the University of Hong Kong. He obtained his Ph.D. from Stanford University and is interested in engineering and employing material properties for innovative waste beneficial uses and environmental treatment processes. Dr. Shih's work particularly focuses on analyzing the pollutant behavior in solid matrices and at water-mineral interfaces, and has contributed to the research areas of hazardous metals, material resource recovery, persistent organic pollutants, water membrane materials, nuclear waste, and soil remediation. Dr. Shih is currently an Associate Editor for Waste Management, together with the other several environmental/materials journals. He is a Scientific Advisory Panel member of International Waste Working Group, the president for Overseas Chinese Environmental Engineers and Scientists Association, and the vice-president for Hong Kong Waste Management Association. Dr. Shih has published more than 90 SCI journal papers, edited 2 books, and authored more than 10 book chapters. Further details about Dr. Shih's research activities can be found at <http://web.hku.hk/~kshih/>.

Users Review

From reader reviews:

Nellie Davis:

Do you have favorite book? When you have, what is your favorite's book? Guide is very important thing for us to be aware of everything in the world. Each reserve has different aim or even goal; it means that publication has different type. Some people truly feel enjoy to spend their the perfect time to read a book. They may be reading whatever they acquire because their hobby is reading a book. What about the person who don't like reading a book? Sometime, particular person feel need book when they found difficult problem or perhaps exercise. Well, probably you will need this Environmental Materials and Waste: Resource Recovery and Pollution Prevention.

Kathleen Allen:

A lot of people always spent their own free time to vacation as well as go to the outside with them family members or their friend. Are you aware? Many a lot of people spent these people free time just watching TV, or maybe playing video games all day long. If you would like try to find a new activity honestly, that is look

different you can read a new book. It is really fun for you. If you enjoy the book that you read you can spend the entire day to reading a guide. The book *Environmental Materials and Waste: Resource Recovery and Pollution Prevention* it is extremely good to read. There are a lot of people who recommended this book. These people were enjoying reading this book. When you did not have enough space to create this book you can buy the particular e-book. You can more easily to read this book from your smart phone. The price is not too costly but this book offers high quality.

Kimberly Langdon:

Do you have something that you like such as book? The publication lovers usually prefer to pick book like comic, brief story and the biggest you are novel. Now, why not trying *Environmental Materials and Waste: Resource Recovery and Pollution Prevention* that give your satisfaction preference will be satisfied by simply reading this book. Reading routine all over the world can be said as the means for people to know world far better than how they react when it comes to the world. It can't be explained constantly that reading habit only for the geeky individual but for all of you who wants to always be success person. So , for all of you who want to start studying as your good habit, you are able to pick *Environmental Materials and Waste: Resource Recovery and Pollution Prevention* become your own personal starter.

Victor Willis:

Some individuals said that they feel bored when they reading a book. They are directly felt the idea when they get a half portions of the book. You can choose the particular book *Environmental Materials and Waste: Resource Recovery and Pollution Prevention* to make your current reading is interesting. Your personal skill of reading expertise is developing when you such as reading. Try to choose very simple book to make you enjoy to read it and mingle the idea about book and studying especially. It is to be initial opinion for you to like to open a book and go through it. Beside that the reserve *Environmental Materials and Waste: Resource Recovery and Pollution Prevention* can to be your brand new friend when you're sense alone and confuse in what must you're doing of the time.
