Representation Theory: A First Course (Graduate Texts in Mathematics) By William Fulton, Joe Harris

The primary goal of these lectures is to introduce a beginner to the finite dimensional representations of Lie groups and Lie algebras. Since this goal is shared by quite a few other books, we should explain in this Preface how our approach differs, although the potential reader can probably see this better by a quick browse through the book. Representation theory is simple to define: it is the study of the ways in which a given group may act on vector spaces. It is almost certainly unique, however, among such clearly delineated subjects, in the breadth of its interest to mathematicians. This is not surprising: group actions are ubiquitous in 20th century mathematics, and where the object on which a group acts is not a vector space, we have learned to replace it by one that is {e. g. , a cohomology group, tangent space, etc. }. As a consequence, many mathematicians other than specialists in the field {or even those who think they might want to be} come in contact with the subject in various ways. It is for such people that this text is designed. To put it another way, we intend this as a book for beginners to learn from and not as a reference. This idea essentially determines the choice of material covered here. As simple as is the definition of representation theory given above, it fragments considerably when we try to get more specific.

Editorial Review

Review

"...displays a novel approach to its subject matter... genuinely informative... skillfully worked and interspersed with novel observations" -- *BULLETIN OF THE IRISH MATHEMATICAL SOCIETY*

"...this textbook is an outstanding example of didactic mastery, and it serves the purpose of the series 'Readings in Mathematics' in a perfect manner." -- *ZENTRALBLATT MATH*

Users Review

From reader reviews:

Christopher Slowik:

The knowledge that you get from Representation Theory: A First Course (Graduate Texts in Mathematics) could be the more deep you excavating the information that hide within the words the more you get serious about reading it. It does not mean that this book is hard to know but Representation Theory: A First Course (Graduate Texts in Mathematics) giving you enjoyment feeling of reading. The article writer conveys their point in particular way that can be understood simply by anyone who read this because the author of this publication is well-known enough. This particular book also makes your own personal vocabulary increase well. Therefore it is easy to understand then can go along, both in printed or e-book style are available. We recommend you for having this particular Representation Theory: A First Course (Graduate Texts in Mathematics) instantly.

Erwin Fast:

This Representation Theory: A First Course (Graduate Texts in Mathematics) are generally reliable for you who want to be described as a successful person, why. The explanation of this Representation Theory: A First Course (Graduate Texts in Mathematics) can be one of the great books you must have is usually giving you more than just simple examining food but feed you with information that perhaps will shock your prior knowledge. This book is handy, you can bring it almost everywhere and whenever your conditions in the e-book and printed types. Beside that this Representation Theory: A First Course (Graduate Texts in Mathematics) forcing you to have an enormous of experience for instance rich vocabulary, giving you demo of critical thinking that we all know it useful in your day action. So , let's have it and revel in reading.

Frank Quintana:

Precisely why? Because this Representation Theory: A First Course (Graduate Texts in Mathematics) is an unordinary book that the inside of the book waiting for you to snap the item but latter it will distress you with the secret the idea inside. Reading this book alongside it was fantastic author who write the book in such incredible way makes the content on the inside easier to understand, entertaining means but still convey the meaning completely. So , it is good for you because of not hesitating having this any longer or you going to

regret it. This phenomenal book will give you a lot of positive aspects than the other book include such as help improving your talent and your critical thinking approach. So , still want to postpone having that book? If I were being you I will go to the book store hurriedly.

Nancy Bowers:

Playing with family in a very park, coming to see the marine world or hanging out with buddies is thing that usually you might have done when you have spare time, and then why you don't try thing that really opposite from that. Just one activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love Representation Theory: A First Course (Graduate Texts in Mathematics), you may enjoy both. It is very good combination right, you still need to miss it? What kind of hang-out type is it? Oh come on its mind hangout fellas. What? Still don't have it, oh come on its known as reading friends.
