Editorial Review

Review

"I recommend this as one of the best recent introductory texts on health service evaluation. It is clearly written, uncluttered by methodological details that can be found in other texts and is broad enough to be relevant to a wide range of people. Useful appendices provide learning exercises and a critical appraisal framework for analysing an evaluation and assessing evidence." - Health Service Journal "As an introductory text this book can be strongly recommended. It covers the body of evaluation theory. The new emphasis on evidence-based health care and the advent of clinical governance has highlighted particular gaps in the training and preparation of health service managers. Increasingly, they need to understand how to commission and critique evaluations. For that group in particular, this text provides an excellent starting point." - British Journal of Health Care Management "Ovretveit provides the reader with an enlightening account of how evaluation might be applied from four different perspectives within a health service scenario: experimental evaluation, economic evaluation, developmental evaluation and managerial evaluation. Whilst in chapters five to eight he provides an analysis of the strengths and weaknesses of each. The whole text achieves a strong sense of cohesion from a thorough consideration of the nature and design of evaluative methods and culminates with proposals for maximizing evaluative procedures within health care." - Medical Sociology News
