Novel Psychoactive Substances: Classification, Pharmacology and Toxicology
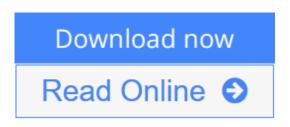

From Academic Press

Novel Psychoactive Substances: Classification, Pharmacology and Toxicology From Academic Press

Novel Psychoactive Substances: Classification, Pharmacology and Toxicology provides readers with background on the classification, detection, supply and availability of novel psychoactive substances, otherwise known as "legal highs." This book also covers individual classes of novel psychoactive substances that have recently emerged onto the recreational drug scene and provides an overview of the pharmacology of the substance followed by a discussion of the acute and chronic harm or toxicity associated with the substance. Written by international experts in the field, this multi-authored book is a valuable reference for scientists, clinicians, academics, and regulatory and law enforcement professionals.

- Includes chapters written by international experts in the field.
- Provides a comprehensive look at the classification, detection, availability and supply of novel psychoactive substances, in addition to the pharmacology and toxicology associated with the substance.
- Offers a single source for all interested parties working in this area, including scientists, academics, clinicians, law enforcement and regulatory agencies.
- Provides a full treatment of novel psychoactive substances that have recently emerged onto the recreational drug scene including mephedrone and the synthetic cannabinoid receptors in 'spice' / 'K2'.

Editorial Review

Review

"...this book provides up to date information on the classification, pharmacology, and toxicology of novel psychoactive substances often referred to as "legal highs" or "bath salts." The recreational abuse of these substances, driven by the twin engines of globalization and technology, has markedly expanded during the past decade...I highly recommend this book to anyone who is involved in investigating, treating, monitoring, or regulating the abuse of novel psychoactive substances." Rating: 4 Stars--Doody.com, January 17, 2014 "The background, analytical techniques, and individual novel psychoactive substances are discussed by researchers in pharmaceuticals, law, public health, and various medical specialties. The topics include a global perspective on monitoring them, analytical techniques for detecting them and their metabolites, synthetic amphetamine derivatives, aminoindane analogues, ketamine, synthetic cannabinoid receptor agonists, natural fungal and herbal substances, and benzofurans and benzodifurans."--Reference & Research Book News, December 2013 "This reference book comprehensively collates a vast range of facts and details about the recently much debated topic of novel psychoactive substances, including the much talked about 'legal highs'...This book would be a useful reference source for those with a keen interest in novel psychoactive substances internationally, and appeal to those working in this specialist area whether in the field of research or academics, or clinically."--PJonline.com, December 4, 2013

About the Author
Drs. Dargan and Wood are both expert advisors to the UK Government (Advisory Council on the Misuse of Drugs, ACMD), UK Law Enforcement Services (Association of Chief Police Officers and Serious Organised Crime Agencies) and the European Union (European Monitoring Centre for Drugs and Drug Addiction, EMCDDA). They run a clinical service and have a clinical and research interest in novel psychoactive substances. They publish widely in this field and have both been invited to give keynote lectures at International meetings on this topic.

Users Review
