## Editorial Review

### Amazon.com Review

What's cooler than outer space? Kids and adults alike will enthusiastically assert that astronauts, space ships, and rocket science are some of the most fascinating subjects on (or rather, off) earth. *Space Exploration*, a stellar addition to Dorling Kindersley's Eyewitness Books series, does this immensely popular topic justice. Learn why astronauts take passports into space! Discover the perplexing mechanics of using a toilet while weightless! View a model of the first planned space station! Kids can also read up on subjects like the space race, moon landings, astronaut fashion, dangers and disasters, and science in space. Abundant full-color photos of everything from dogs in spacesuits to views from satellites complete this zero-gravity exploration, and ensure that if your children weren't already space-obsessed, there will be no turning back now. (*Ages 9 to 12*)

### From School Library Journal

Grade 3-6?The once-revolutionary nonfiction series ventures beyond our atmosphere for the first time in a survey that touches on an array of space-exploration topics, from the early history of rocketry to animals in orbit, space stations, astronaut underwear, and probes to the outer planets. The familiar blizzard of cutout color illustrations includes sharp photos of actual spacecraft, scale models, toys, commemorative bric-a-brac, new and worn-out parts, plus portraits of people and selected heavenly bodies, all with detailed captions. The focus is, eye-opening, international, with European Space Agency technology and astronauts from small countries sharing equal time with the personnel and programs of the U.S. and the former Soviet Union. What with recent events on Mars and Mir, the information is already dated, but the book's broad scope and surefire popularity make it a useful lead-in to more systematic treatments of the subjects.?John Peters, New York Public Library
