Water Centric Sustainable Communities: Planning, Retrofitting and Building the Next Urban Environment By Vladimir Novotny, Jack Ahern, Paul Brown

The current literature compartmentalizes the complex issue of water and wastewater into its discrete components; technology, planning, policy, construction, economics, etc. Considered from the perspective of sustainability, however, water in the urban environment must be approached as a single resource that can be continuously reused and recycled. This book will be the first to capture all of the current work on this idea in a single, integrated, plan for designing the water-centric cities of the future. From new construction to the retrofitting of existing systems, this book presents the case for a new urban relationship to water, one with a more sustainable connection to the environment and the hydrological cycle. Through case studies of successfully planned and built systems around the world, the book will educate the reader about the need for a new approach to urban water management, and make the case that these changes are not only possible but imperative.

Editorial Review

From the Back Cover

The book that breaks new ground for creating water centric cities of the future

Outdated water and wastewater practices in conjunction with increased consumption from a growing population have left today's urban communities perilously close to running dry—or ironically—being inundated with stormwater-related floods. *Water Centric Sustainable Communities* departs from the traditional "clean water in, dirty water out" approach to establish a holistic paradigm for integrated water conservation and use in cities by embracing the three r's: reduce, reuse, recycle. This book provides the forum for lively discussion on the social concerns, technological challenges, planning issues, and economic woes putting up barriers to the reality of achieving a sustainable urban environment—and presents expert suggestions for overcoming them. *Water Centric Sustainable Communities*:

- Includes case studies of successful implementations from cities around the world
- Explores the history of urban water, stormwater, and wastewater management
- Discusses not only newly planned and constructed infrastructure, but also the retrofit and upgrading of existing infrastructure
- Offers new methods to integrate the new water paradigm with urban planning and design
- Provides guidance on connecting microscale components (green roofs, pervious pavements, stream restoration and daylighting, riparian zone design, water reclamation and reuse, drainage, energy) in a distributed macroscale sustainable water ecosystem

The first book to combine landscape, water management, transportation, infrastructure, and triple bottom line assessment into one integrated system, *Water Centric Sustainable Communities* is inspired in its mission to avoid an unthinkable ecological catastrophe. It offers an eye-opening reminder of how today's actions can have a profound impact on tomorrow's survival by stressing the importance of stabilizing the Earth's water and energy supply now—to keep it sustainably flowing into the future.

About the Author

Vladimir Novotny is Professor at Northeastern University in Boston, Massachusetts, and Emeritus Professor at Marquette University in Milwaukee, Wisconsin. He is also President of AquaNova, LLC.

Jack Ahern is Professor of Landscape Architecture and Regional Planning at the University of Massachusetts in Amherst, Massachusetts.

Paul Brown is Executive Vice President at CDM in Cambridge, Massachusetts, and is also Technical Director of the Neysadurai Centre for Integrated Water Resources and Urban Planning in Singapore.

Users Review

From reader reviews:

Michael Riddle:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to know everything in the world. Each book has different aim as well as goal; it means that guide has different type. Some people truly feel enjoy to spend their the perfect time to read a book. They are reading whatever they take because their hobby is definitely reading a book. Think about the person who don't like looking at a book? Sometime, person feel need book when they found difficult problem or maybe exercise. Well, probably you will require this Water Centric Sustainable Communities: Planning, Retrofitting and Building the Next Urban Environment.

Francine Nott:

In this 21st centuries, people become competitive in each and every way. By being competitive currently, people have do something to make them survives, being in the middle of typically the crowded place and notice by means of surrounding. One thing that oftentimes many people have underestimated that for a while is reading. Yeah, by reading a publication your ability to survive increase then having chance to stay than other is high. In your case who want to start reading a book, we give you this particular Water Centric Sustainable Communities: Planning, Retrofitting and Building the Next Urban Environment book as beginning and daily reading e-book. Why, because this book is greater than just a book.

Mark Carlton:

Do you like reading a reserve? Confuse to looking for your chosen book? Or your book ended up being rare? Why so many problem for the book? But any people feel that they enjoy to get reading. Some people likes studying, not only science book and also novel and Water Centric Sustainable Communities: Planning, Retrofitting and Building the Next Urban Environment or perhaps others sources were given know-how for you. After you know how the truly great a book, you feel need to read more and more. Science publication was created for teacher or students especially. Those ebooks are helping them to put their knowledge. In other case, beside science reserve, any other book likes Water Centric Sustainable Communities: Planning, Retrofitting and Building the Next Urban Environment to make your spare time considerably more colorful. Many types of book like here.

Jerri Jackson:

As a scholar exactly feel bored in order to reading. If their teacher expected them to go to the library as well as to make summary for some e-book, they are complained. Just little students that has reading's heart and soul or real their hobby. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading seriously. Any students feel that studying is not important, boring along with can't see colorful pictures on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this period of time, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore , this Water Centric Sustainable Communities: Planning, Retrofitting and Building the Next Urban Environment can make you truly feel more interested to read.
