Designing Embedded Hardware: Create New Computers and Devices By John Catsoulis

Embedded computer systems literally surround us: they're in our cell phones, PDAs, cars, TVs, refrigerators, heating systems, and more. In fact, embedded systems are one of the most rapidly growing segments of the computer industry today. Along with the growing list of devices for which embedded computer systems are appropriate, interest is growing among programmers, hobbyists, and engineers of all types in how to design and build devices of their own. Furthermore, the knowledge offered by this book into the fundamentals of these computer systems can benefit anyone who has to evaluate and apply the systems. The second edition of *Designing Embedded Hardware* has been updated to include information on the latest generation of processors and microcontrollers, including the new MAXQ processor. If you're new to this and don't know what a MAXQ is, don't worry--the book spells out the basics of embedded design for beginners while providing material useful for advanced systems designers. *Designing Embedded Hardware* steers a course between those books dedicated to writing code for particular microprocessors, and those that stress the philosophy of embedded system design without providing any practical information. Having designed 40 embedded computer systems of his own, author John Catsoulis brings a wealth of real-world experience to show readers how to design and create entirely new embedded devices and computerized gadgets, as well as how to customize and extend off-the-shelf systems. Loaded with real examples, this book also provides a roadmap to the pitfalls and traps to avoid. *Designing Embedded Hardware* includes:

- The theory and practice of embedded systems
- Understanding schematics and data sheets
- Powering an embedded system
- Producing and debugging an embedded system
- Processors such as the PIC, Atmel AVR, and Motorola 68000-series
- Digital Signal Processing (DSP) architectures
- Protocols (SPI and I2C) used to add peripherals
- RS-232C, RS-422, infrared communication, and USB
- CAN and Ethernet networking

- Pulse Width Monitoring and motor control

If you want to build your own embedded system, or tweak an existing one, this invaluable book gives you the understanding and practical skills you need.

Editorial Review

About the Author

John Catsoulis lives under the tropical sun in Brisbane, Australia. He has a Bachelor of Science with Honors (Griffith University) with a triple major in quantum physics, electronics and mathematics, and a Master of Engineering (La Trobe University) in specialized computer architectures. He has been responsible for the design of more computer systems than he can remember, from tiny finger-sized machines to multi-processor compute engines. Corporations and government bodies around the world have used his designs and software. John has also taught the dark arts of computer architecture and design at several Universities. He is currently conducting research at the University of Queensland into fault-tolerant reconfigurable computers for spacecraft avionics. When not slaving over a hot microprocessor, John enjoys hiking and camping, wildlife and landscape photography, fishing, dabbling in permaculture, cooking Indian and Mediterranean food, and playing model trains with his nephews, Andrew and James.

Users Review

From reader reviews:

Angie Dean:

The book *Designing Embedded Hardware: Create New Computers and Devices* can give more knowledge and also the precise product information about everything you want. Why must we leave the best thing like a book *Designing Embedded Hardware: Create New Computers and Devices*? Several of you have a different opinion about publication. But one aim that will book can give many info for us. It is absolutely appropriate. Right now, try to closer using your book. Knowledge or details that you take for that, you could give for each other; you may share all of these. Book *Designing Embedded Hardware: Create New Computers and Devices* has simple shape however, you know: it has great and large function for you. You can seem the enormous world by start and read a book. So it is very wonderful.

Mary Partee:

Do you considered one of people who can't read pleasant if the sentence chained inside the straightway, hold on guys this particular aren't like that. This *Designing Embedded Hardware: Create New Computers and Devices* book is readable by means of you who hate the straight word style. You will find the facts here are arrange for enjoyable reading through experience without leaving perhaps decrease the knowledge that want to supply to you. The writer connected with *Designing Embedded Hardware: Create New Computers and Devices* content conveys objective easily to understand by most people. The printed and e-book are not different in the information but it just different by means of it. So , do you even now thinking *Designing Embedded Hardware: Create New Computers and Devices* is not loveable to be your top listing reading book?

Dexter Forsyth:

The actual book *Designing Embedded Hardware: Create New Computers and Devices* has a lot of info on it. So when you check out this book you can get a lot of gain. The book was published by the very famous author. The writer makes some research ahead of writing this book. This particular book is very easy to read; you can get the point easily after perusing this book.

Cheryl Kirkland:

The reason why? Because this *Designing Embedded Hardware: Create New Computers and Devices* is an unordinary book that the inside of the publication is waiting for you to snap that but later it will shock you with the secret the item inside. Reading this book adjacent to it was a fantastic author who all write the book in such an awesome way makes the content within easier to understand, an entertaining approach but still conveys the meaning completely. So, it is good for you because of not hesitating having this any longer or you going to regret it. This book will give you a lot of rewards than the other books possess such as help improving your expertise and your critical thinking means. So, still want to hold up having that book? If I were being you I will go to the reserve store hurriedly.
